

### Why 123 Home Improvements Inc?

“Erik, the owner of 123 Home Improvements came to our home, listened to our ideas and came up with a plan within my budget. No surprises, no gouging, what we agreed to is what was professionally delivered. They showed up when promised, on time, cleaned up each day and remembered the little details that I thought would be forgotten. The working guys are polite and never forget they were working in and around my home. Bottom line, we think the work could not have turned out better and we are gratified with the value 123 brought to our home. The results were worth every penny spent and translated to increased value and livability to our home.”  
-Sean Parlakian, Long Beach Customer

## Why Solar?

Solar energy is clean, renewable and good for the environment. Solar is widely thought to be the energy choice for the future. The use of solar energy to produce electricity allows the user to become less dependent on the worlds fossil fuel supplies.

Although there is an initial investment of solar cells, once installed, they provide a free source of electricity, which will pay off over the coming years.

An instant 30% rebate from LIPA and a 30% tax credit makes Solar the obvious choice. Panels have a warranty for 30+years. This gives you an estimated \$72,000 of savings on electric bills.

## Solar Panel Sale!

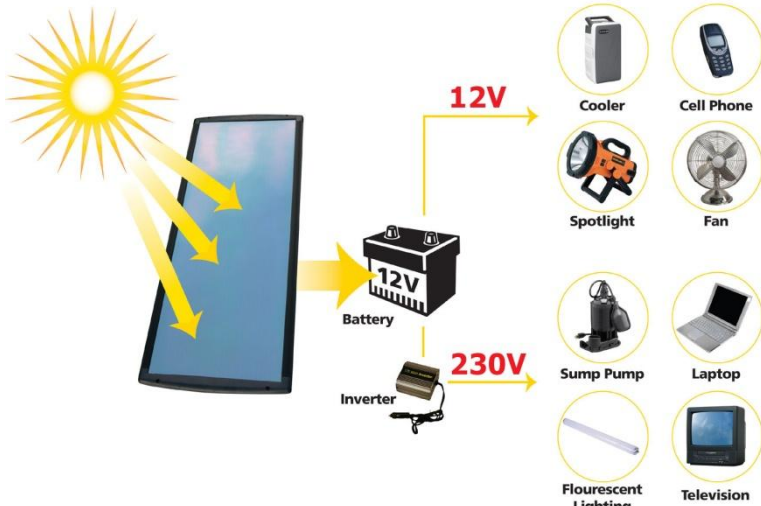

**10% Off All Photovoltaic installations.**

\*On all contracts until March 31st. Work can be scheduled after March 31st.

Installation of a 7200 watt photovoltaic (Solar Panel) unit. Summer of 2009 in Long Beach.

### How Solar Works

### Save \$ and Save the Environment

Solar panels use light energy (photons) from the sun to generate electricity through the photovoltaic effect. The majority of modules use wafer-based crystalline silicon cells, a commonly used semi-conductor.
